

Juneau International (PAJN), Alaska Scenery for FSX
by: Scenery4FlightSims.com

This is fictional scenery for Juneau, Alaska (PAJN), designed for FSX. I created this scenery to update the airport and surrounding area and replace several of the unrealistic looking buildings with something more appealing.

Here is what to look for in this scenery package:

- > Replaced the several original default buildings with default buildings that look like they would fit better in this environment.
- > Added some static aircraft.
- > Added static seaplanes along shoreline of water runway.
- > Added night lighting to the ramp areas.
- > Reworked the parking ramps to more closely match the real world airport diagram.
- > Changed the landclass scenery in the area between the airport and river to remove the non-existent buildings.
- > Rearranged parking.
- > Added additional taxiway signs and updated existing signs to match real world application.
- > Added missing taxiways.
- > Added seaplane harbor access road.
- > Added boundary fence.
- > Added cruise ship & fishing boat.
- > Removed the unrealistic "surf/waves" from the seaplane harbor.
- > Added moving jetways.
