

San Diego Int'l Airport (KSAN) - for FSX
by: Scenery4Flightsims.com

This is enhanced fictional scenery for KSAN, San Diego Int'l Airport, California. I brought this airport up to date because it had been added on to and approaches changed since FSX was developed.

In 2015, traffic at San Diego International exceeded 20 million passengers. The airport had about 465 scheduled operations carrying 48,000 passengers each day, a total of 18,756,997 passengers in 2014. The airport has domestic flights and also has international flights to Canada, the United Kingdom, Mexico, and Japan.

San Diego is the largest metropolitan area in the United States that is not an airline hub or secondary hub; however, San Diego is a focus city for Alaska Airlines and Southwest Airlines. The top five carriers in San Diego during 2015, by seat capacity, are Southwest Airlines (42.7%), American Airlines (14.0%), United Airlines (11.2%), Alaska Airlines (10.1%), and Delta Air Lines (9.9%). It is the busiest single-runway commercial airport in the United States. Gatwick Airport has two runways, but can only use one at a time.

These are the changes/improvements:

- Added airport property to accommodate ramp and terminal expansion.
- Removed or moved buildings that were misplaced
- Added addition to passenger terminal.
- Added / edited taxi signs.
- Added new taxiways.
- Updated numerous other taxiways.
- Added missing approaches and necessary waypoints.
- Added additional terminal, cargo and ramp parking.
- Added night lighting for terminal and ramps.
